Summary

Mid-level Full-Stack Developer specializing in Vue.js and Nuxt.js, with experience building scalable, production-ready web applications from frontend interfaces to backend services and APIs. Strong expertise in responsive UI development, performance optimization, accessibility, SEO, application architecture, and API integration. Focused on clean, maintainable code and delivering secure, high-performance user experiences that improve engagement, reliability, and business growth.

Experience

Mid Frontend Developer, YouLearnt - Improved performance by 30% using image optimization and lazy loading. - Reduced CLS ~25% and improved FCP ~20% through advanced font optimization. - Enhanced accessibility (WCAG) achieving 95+ Lighthouse score. - Boosted SEO and CTR (~20%) using structured data (JSON-LD).	09/2025 – Present Manchester, United Kingdom
Frontend Developer, Megatron Company - Increased user retention by 25% by fixing crashes and optimizing performance. - Built interactive dashboards with Tailwind for 1,000+ users. - Improved engagement by 20% with PWA features and multilingual support.	08/2024 – 09/2025 Giza, Cairo
Web & IT Support, Egyptian Armed Forces - Developed internal tools with Node.js and databases to automate reporting. - Maintained web pages and resolved technical issues under pressure.	04/2023 – 06/2024 Cairo

Education

Bachelor of Science in Computer Science	09/2018 – 05/2022
--	-------------------

Technical Skills

- JavaScript - Nuxt.js - Tailwind CSS - CSS - Git/GitHub - NoSQL - MongoDB	- Vue.js - Pinia - HTML - Vite - SQL - Nest.js - Node.js
--	--

Selected Projects

Resux — Resumable Full-Stack Web Framework,

TypeScript · Vue SFC · Vite · Nitro · H3 · SSR · Vitest · Node.js

- Designed and developed an experimental HTML-first web framework focused on resumability, server rendering, performance, and minimal client-side runtime cost.
- Built a custom compiler and runtime architecture supporting Vue-like Single File Components, file-based routing, state serialization, resumable event handlers, and client navigation.
- Implemented framework-level features including server routes, middleware, plugins, layouts, data fetching, runtime configuration, SEO APIs, i18n, UI components, icons, fonts, and optimized image/video handling.
- Built CLI tooling for project creation, development, builds, inspection, validation, previewing, and production deployment.
- Established automated testing, type checking, package verification, bundle-size checks, deployment verification, and CI quality workflows.
- Created dedicated documentation and production test applications to validate framework features and deployment behavior.

TaskFlow — Full-Stack Task Management Application,

Node.js · Express.js · MongoDB · Mongoose · REST API

- Built a full-stack task management application with a RESTful backend and browser-based frontend.
- Designed CRUD APIs using a structured controller, route, model, middleware, and utility architecture.
- Implemented MongoDB persistence with Mongoose, pagination, request validation, centralized error handling, and consistent API responses.
- Containerized the application with Docker and configured environment-based application and database settings.
- Deployed the application as a working production service.

YouLearnt

09/2025

Vue.js, Nuxt.js, Tailwind CSS, Vuetify, Pinia, Sentry, Firebase

- Championed website performance optimization, decreasing average page load time by 1.5 seconds, resulting in a 20% reduction in bounce rate and a 5% increase in conversions.
- Reduced Cumulative Layout Shift (CLS) by ~25% and Authored First Contentful Paint (FCP) by ~20% by implementing comprehensive font optimization techniques, including font subsetting, strategic preloading, and resilient fallback configurations.
- Elevated web accessibility standards by implementing semantic HTML and conducting bi-weekly accessibility audits, reducing accessibility-related support tickets by 20% within six months.
- Upgraded production debugging and maintenance efficiency by enabling source maps for minified JavaScript, reducing investigation and debugging time by ~50% while enhancing error traceability.
- Strengthened SEO and search visibility by implementing Schema.org structured data (JSON-LD), increasing rich result eligibility and driving an estimated ~20% uplift in organic click-through rate (CTR).

Book Store for Download & Reading Books

07/2025

Vue.js, Nuxt.js, Tailwind CSS

- Created a book download and reading platform, increasing average session duration by 30%.
- Prepared lazy loading techniques and advanced caching strategies, achieving a 40% decrease in page load times, resulting in a significant improvement in user experience and website engagement metrics.

Comics Platform & Dashboard

12/2024

Nuxt.js, Vue.js, Tailwind CSS

- Created an innovative comic viewing experience incorporating responsive analyzed principles and simplified navigation paths; this initiative resulted in users spending on average 15 minutes longer per visit on the platform.
- Enhanced scalability using modular component structures and advanced state management, achieving 35% faster rendering times.

Medical Corporate Platform,

Nuxt.js · Vue.js · Tailwind CSS · Nuxt i18n · VueUse · VeeValidate

- Developed a large responsive corporate web platform using Nuxt and Vue with reusable component-based architecture.
- Built multilingual experiences with internationalized routing and localized application content.
- Developed product, blog, career, partner, investment, contact, and corporate-information experiences.
- Implemented form validation, responsive layouts, reusable UI systems, animations, optimized media loading, and device-aware experiences.
- Applied SEO and frontend performance techniques including optimized hydration, lazy-loaded media, fonts, metadata, and modern Nuxt rendering capabilities.
